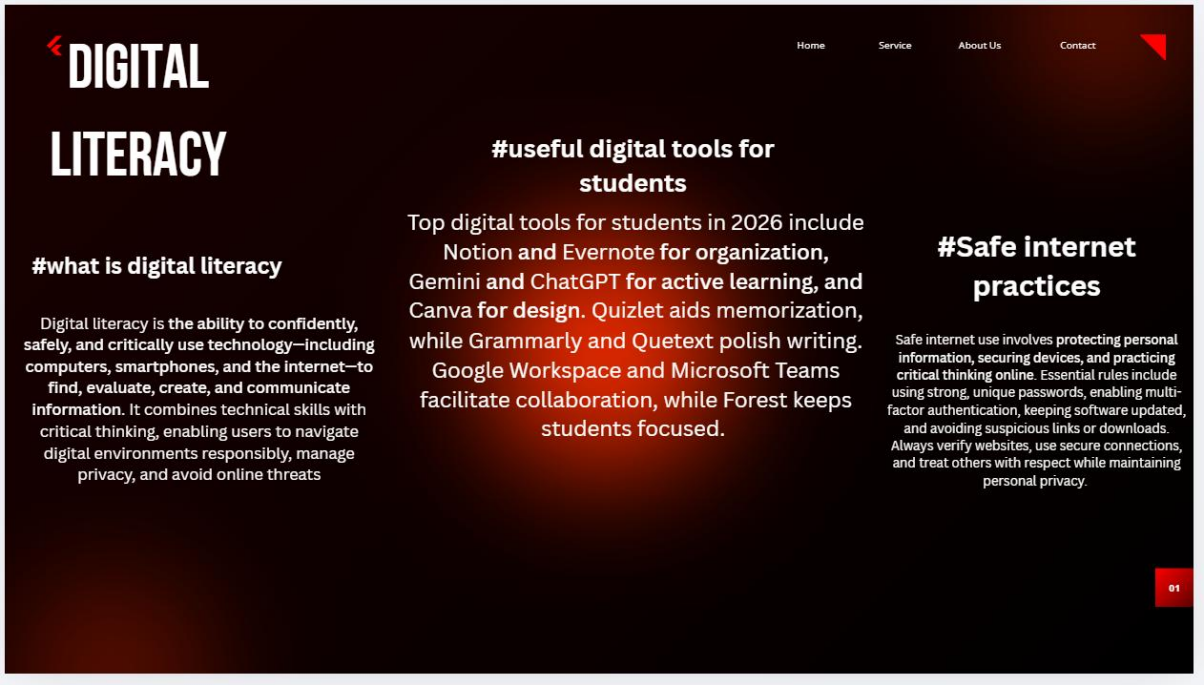
Name: Debartha Saikia

Reg no: 25BOE10082

Task-1-presentation: Canva/Prezi link or exported image, brief description

#which tool you used, what your design shows, and one thing you found difficult or interesting while making it.

- Ans; **Tool Used**: The design was created using **Canva**, as indicated by the interface and URL in the screenshot.
- **Design Content**: The presentation covers the topic of **Digital Literacy**, with sections on:
    - Useful digital tools for students
    - What digital literacy is
    - Safe internet practices
- **Difficult/Interesting Aspect**: I am unable to provide information on what the creator of this specific design found difficult or interesting, as I do not have access to their personal experience.



Task2: -portfolio: Screenshots of profiles set up, reflection notes

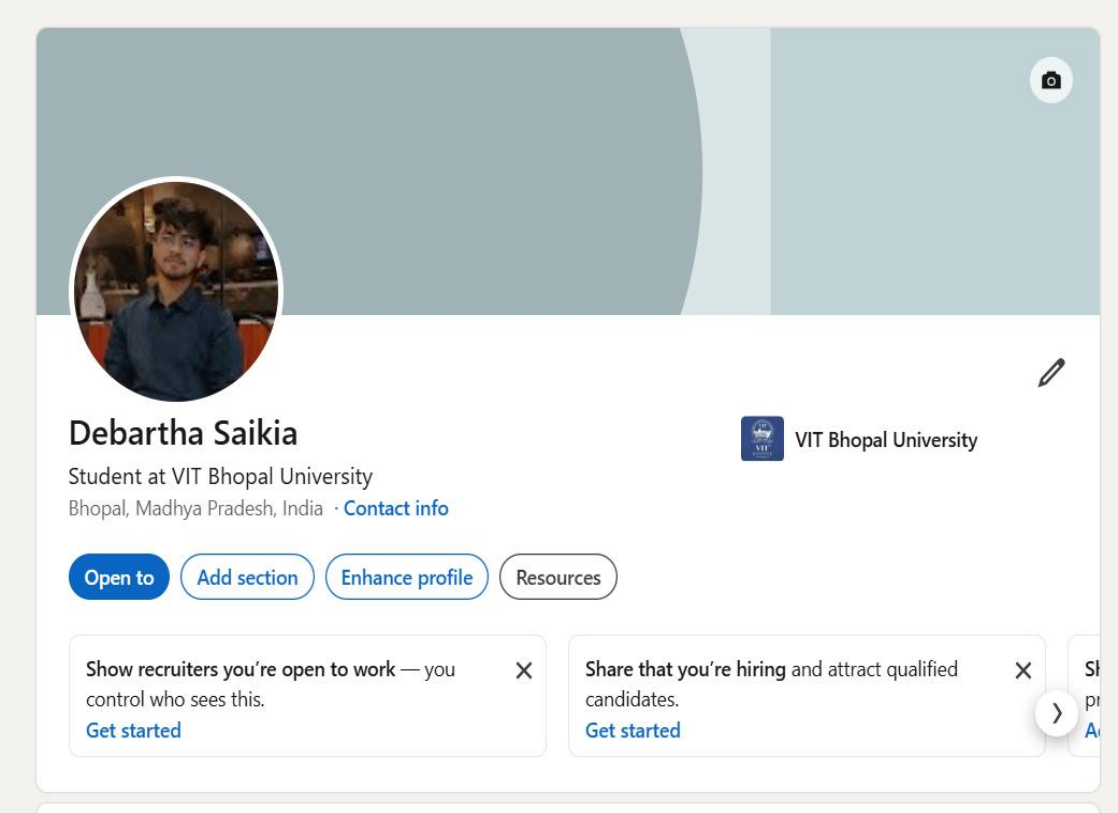
#Screenshots of profiles set up, reflection notes

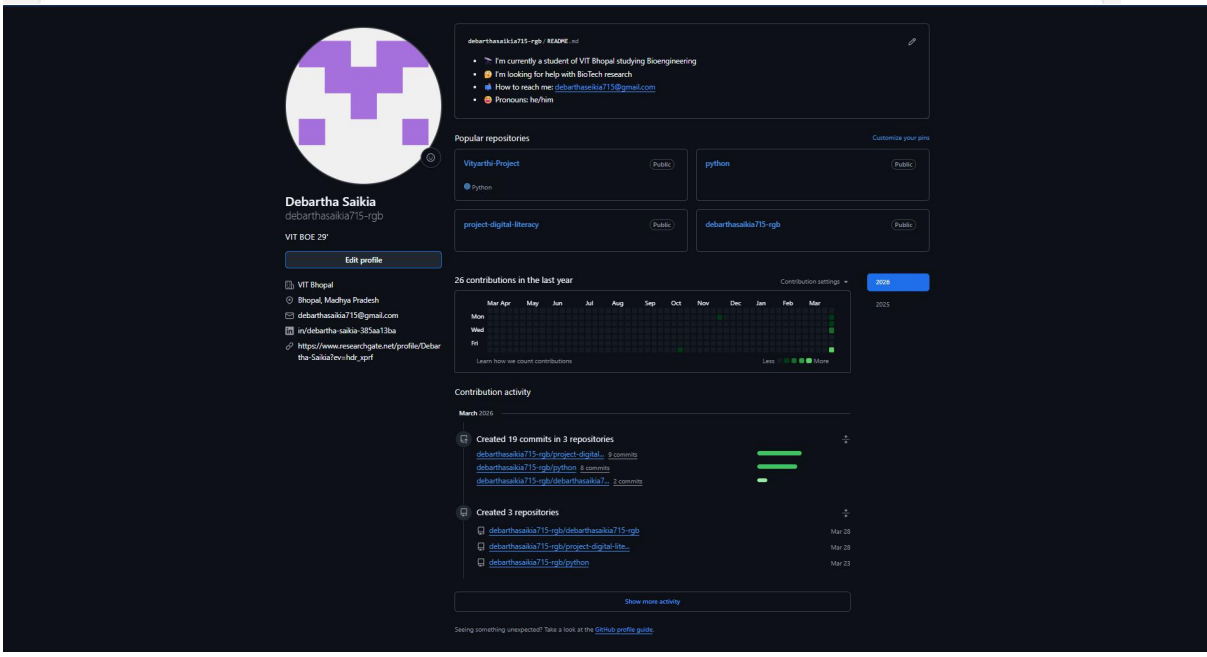
Ans: I have chosen GitHub and **LinkedIn** as the primary platforms for the next four years (2026–2030) to establish a technical portfolio and professional network. GitHub will host and demonstrate my code, projects, and version control skills, while LinkedIn will manage my professional brand, networking, and job opportunities.

- ***GitHub (Portfolio & Code Management):***
    - **Use:** Storing project repositories, tracking development history via commits, and hosting live projects using GitHub Pages.
    - **4-Year Plan:** I will maintain a consistent activity graph by pushing projects weekly, document every repository with a

comprehensive README, and contribute to open-source to demonstrate collaboration.

- **LinkedIn (Networking & Career Development):**
    - **Use:** Connecting with industry professionals, building a professional brand, and exploring job opportunities.
    - **4-Year Plan:** I will optimize my profile with keywords, post updates about my projects, interact with content to boost visibility, and connect with peers to build a strong professional
      network



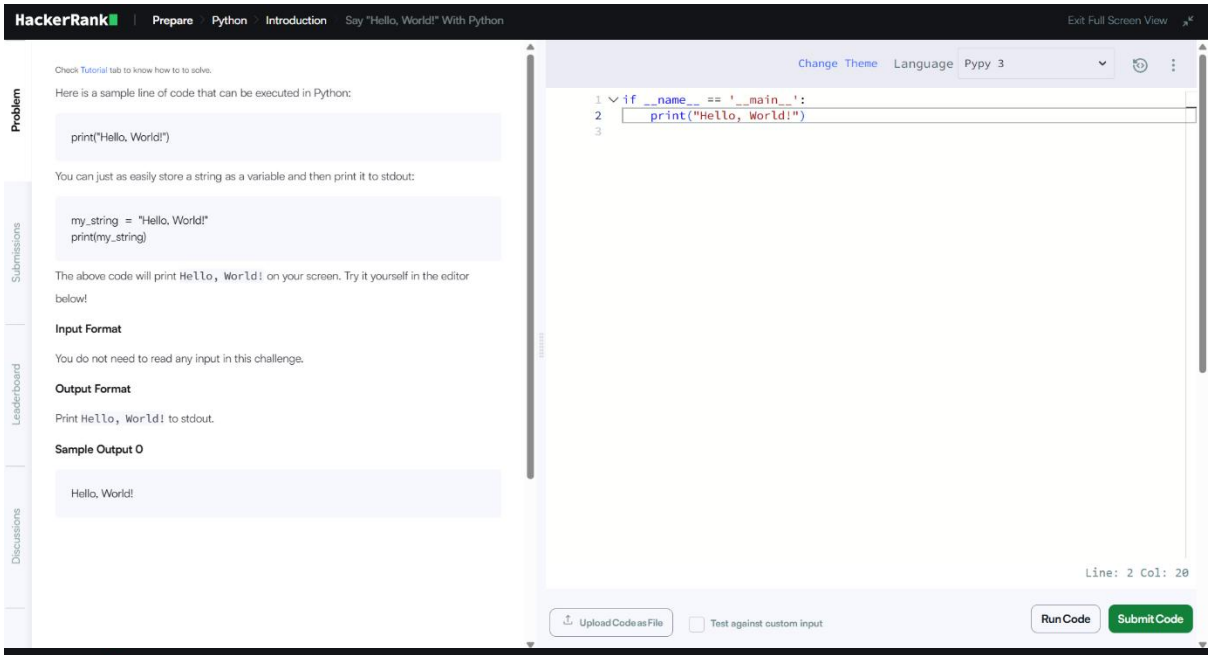


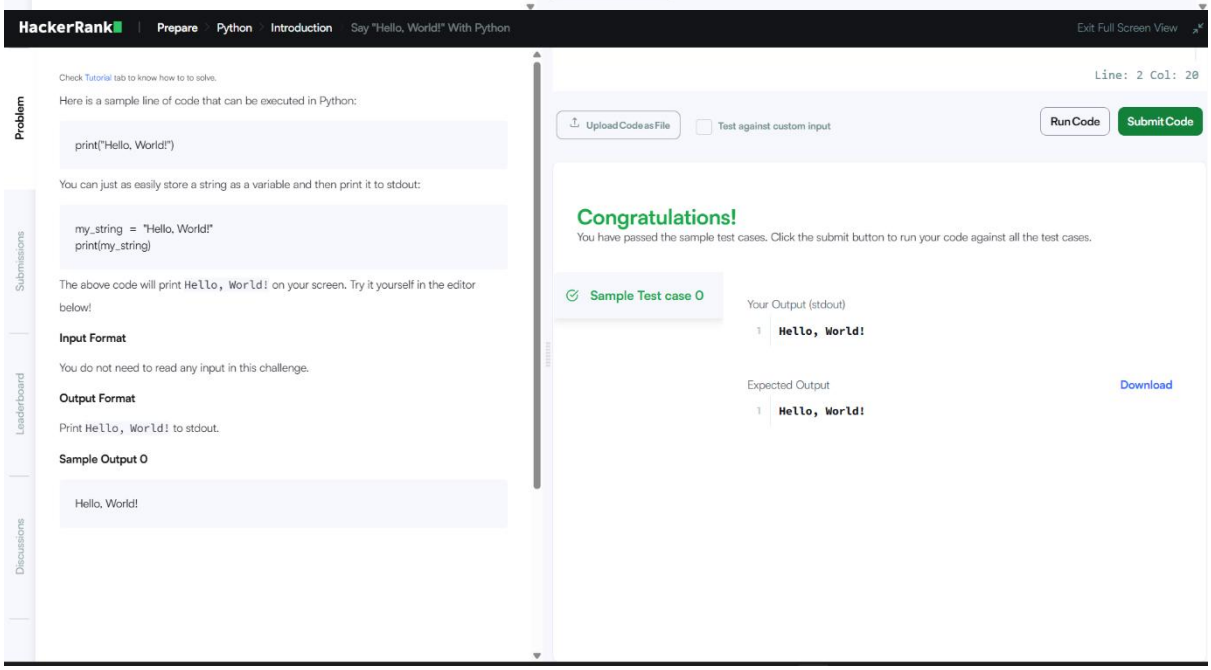
task-3-platforms:

Platform screenshots, activity proof, notesPlatform screenshots, activity proof, notes

Part A – Coding Practice (choose one):

HackerRank's 'Solve Me First' or the Python Introduction challenge





Part B – Google Workspace Collaboration (mandatory):

The platform used was Google Forms to build a quiz on digital citizenship, which helps academically by facilitating interactive assessment and information management.

The platform used is Google Forms, which is part of the Google suite of software tools often used in educational settings to manage assignments and create assessments.

The activity involved building or practicing a multiple-choice quiz focused on digital citizenship topics, specifically "what is a digital footprint?", how to handle suspicious emails, and what it means to be a responsible digital citizen.

These tools help academically in several ways:

- **Assessment:** They allow for the creation of tests and provide instant feedback, which helps in evaluating understanding of course material.
- **Organization:** Educational platforms offer features that help students and educators organize information and manage class content efficiently.
- **Engagement:** Creating or taking interactive quizzes helps in engaging with the material and can improve information retention.
- **Performance:** By providing structure and tools for practice, they can help improve overall academic performance and study habits.

Quiz
digital literacy

Which of the following is an example of a strong password? *

- a) password123
- b) myname2005
- c) T#9mK!vL2q
- d) vitbhopal

What does "phishing" refer to? *

- a) A type of computer virus that deletes files
- b) A fraudulent attempt to steal sensitive information by pretending to be a trusted source
- c) A method of improving internet speed
- d) A way to share files online securely

Which of these is the correct way to report a cybercrime in India? *

- a) Call 112
- b) Visit cybercrime.gov.in or call helpline 1930
- c) Email the nearest police station
- d) Post about it on social media

Which platform is primarily used by developers to host and share code? *

- a) LinkedIn
- b) Kaggle
- c) GitHub
- d) Google Forms

In your own words, what does "digital literacy" mean and why do you think it matters for college students today? *

Your answer

Task 4 :Draft a Professional Email & Etiquette Guide

Situation: Misinterpreted Message in a Group Project

A college student was working on a group assignment and sent a message in the group chat saying,
"This part is wrong. Fix it."

The message was short and lacked tone, so other group members felt offended and thought the student was being rude and disrespectful. This led to arguments in the group, poor coordination, and delays in completing the project. Eventually, the group received a lower grade because they couldn't work well together.

What Went Wrong

- The message was **too blunt and unclear in tone**
- No explanation or constructive feedback was given
- Lack of polite language caused **misunderstanding and conflict**

What Could Have Been Done Differently

- Use a **polite and collaborative tone**, e.g.,
  "Hey, I think there might be a small mistake in this part. Can we review it together?"
- Provide **specific feedback** instead of vague criticism
- Add context or clarification to avoid misinterpretation

Task 5 Cybercrime Awareness Case Study & Prevention Guide

Crime: Phishing

What the Crime Is

Phishing is a type of cybercrime where attackers pretend to be a trustworthy source (like a bank, college, or company) to trick people into sharing sensitive information such as passwords, OTPs, or bank details.

How It Typically Happens (Step-by-Step)

1. **Fake message is sent** – The attacker sends an email, SMS, or social media message pretending to be from a trusted source.
2. **Creates urgency or fear** – The message may say things like "Your account will be blocked" or "You've won a prize."
3. **Victim clicks a link** – The link leads to a fake website that looks real.
4. **Information is entered** – The victim enters login details, OTP, or personal data.
5. **Data is stolen** – The attacker collects this information and uses it for fraud or identity theft.

Who Is Usually Targeted

- College students and young users (less experienced with online threats)
- People who frequently use online banking or shopping

- Employees of organizations (to gain access to company systems)
- Elderly individuals who may not recognize scams easily

Consequences

- **Financial loss** (money stolen from bank accounts)
- **Identity theft** (misuse of personal information)
- **Hacked accounts** (email, social media, etc.)
- **Emotional stress and loss of trust**
- In some cases, **legal or academic issues** if accounts are misused

B. : what surprised you most while researching this topic, and one habit you will personally change as a result.

Reflection

What surprised me most:
What surprised me the most while researching this topic is how **easily people can fall victim to cybercrimes like phishing**, even when they seem aware of online risks. I learned that attackers often use very realistic messages and create a sense of urgency, which makes people act quickly without thinking. I didn't realize that even small mistakes, like clicking a link or sharing an OTP, can lead to serious consequences like financial loss or identity theft.

One habit I will change:
As a result, one habit I will personally change is to **always verify links and messages before taking any action**. I will avoid clicking on unknown links

and will double-check the sender's authenticity, especially for emails or messages asking for personal or financial information.
